## LOCATION PUZZLE

## UNDERGRAD

- If two circles with symbols are connected by segments that attach to an empty circle with no symbol, count the [segment] - [empty circle] - [segment] as a single segment. This occurs thrice.
- You can otherwise ignore all circles with no art, and the segments that connect to them.

- All remaining circles will be used at least twice.
- All remaining segments will be used at least once.
- At either end of the work, there are QR codes that might help decipher the symbols. If you are unable to access this supplemental information, speak with game control.
